

INSTRUCTIONS

#21-237 Poly Mortar Tub for Crane Lifting

The Bon Poly Mortar Tub for Crane Lifting should be lifted by means of chains (or lifting slings attached to the handles) of adequate length to ensure that there is no undue side forces on the handles.

Danger:

The Bon Mortar Tub should not be lifted by forklifts using one handle, when the tub is filled with solid mortar. This results in a lever force on the handle which could crack the welds and could result in an accident on site.

Caution:

The Bon Mortar Tub should NOT be used to lift or transport any other type of building material waste. The Bon Mortar Tub is designed only for mortar.

Safety:

The Bon Mortar Tub is tested to a 200% safety margin of the lifting capacity.

Manhandling:

The Bon Mortar Tub should be lifted by two personnel on site or dragged by one person into filling position.
