

# Wall Cap Concrete Forms

Create beautiful detail to top of wall

- Most smaller square foot jobs are poured with a sand/cement mix
- Larger jobs can be 3000 # pea rock pump mix
- For small or larger pours, an air entraining admixture must be used to prevent shrinkage cracks — 5% to 6% is recommended
- Concrete must have 5" slump since the forms must be tapped vigorously to eliminate honeycombs
- If forms are stripped in time, a paint brush finish will be sufficient

Wall Cap Forms are manufactured in 8' sections and sold in cartons

Part #	Detail	Sections/Carton	Linear Feet/Carton
32-185	OG-6	10	80'
32-186	OG-4	10	80'
32-187	Mini Cap	10	80'
