

# Step Liner Concrete Forms

Shaping overhang areas is easy with Step Liners

- Use Liner as manufactured for 7-1/2" riser; or break-away end for 6-1/2" or 5-1/2" risers
- Use spray adhesive and/or roofing tracks to fasten Step Liner to the inside of form work
- Note: Radius steps may be set using bender board or Masonite siding instead of rigid wooden forms
- Step Liner can be stripped and finished much sooner than conventional forms because it acts as a foam cushion against concrete

Step Liners are 7-1/2" high, scored in two places to accommodate three popular riser heights

Step Liners are manufactured in 4' sections and sold in cartons

Part #	Detail	Sections/Carton	Linear Feet/Carton
32-189	Intermediate	10	40'
32-190	Sandstone	7	28'
32-191	Capstone	10	40'
32-192	Regular	10	40'
